

IN THE ABSTRACT:

Please substitute the following abstract for the abstract starting at page 46, line 3 and ending at line 18.

An electrophoretic display device is ~~constituted by~~ includes a substrate, a partition wall disposed on a surface of the substrate[[:]], and a liquid layer, disposed in a container defined by the substrate and the partition wall, ~~comprising~~ including electrophoretic particles and a dispersion medium[[:]]. In addition, a first electrode is formed at a position apart from the partition wall on the substrate, a second electrode is formed along the partition wall[[:]], and ~~means for applying a voltage applicator applies~~ a voltage between the first electrode and the second electrode. At the surface of the substrate defining the container, a resistance layer electrically connecting the first electrode and the second electrode is formed, and the electrophoretic particles in the container are moved between a surface of the partition wall and a surface of the resistance layer to effect display.
